

Double-Deck Drier for Expander :

1) The picture of the Double—Deck Drier :

2) Purpose of the Double-deck Drier:

These kind of mills are suitable for the drying and cooling of soybean meal, cotton-seed meal or sunflower seed meal, also reach the the same effect to the feedingstuff industry.

3) Main strong points of FRS-RBD-2 Double-deck Drier:

- A. There are more great output and better effect than the same kind of products produced by other factory, furthermore, they could avoid lots of weaknesses, such as meal crazing, the heat and moisture inside the meal are difficult to emit within the cooling time.
- B. The late-model rotary scatter-meal device enable the meal could be cooled and dried symmetrical and adequately, and lower the cracked rate obviously.
- C. Upside of the mill installing on the close-air device, which could prevent the dried airflow begetting electrocircuit short.
- D. This whole machine need the low electric power, which could saving energy, lead to the cost be reduced greatly at the long term.
- E. There is the overhaul door outside the mill, which is convenient to maintain and overhaul on daily. There are several inspection windows on sides, which is convenient to inspect while the mill is in motion.

4) Specification:

Specification	FRS-RBD-2 30x30x2
Overall dimension (mm)	3430 × 3430 × 7900
Output (T/D)	2500t/d
Motor power (KW)	90KW
